Abstract: Research integrity practices at UMC's

University Medical Centers (UMCs) can foster research integrity by incentivising practices that increase research transparency and robustness. But how prevalent are these practices at UMCs, and where is there room for improvement? We performed a status quo analysis of current trial registration and reporting practices at German UMCs and developed a clinical trial transparency dashboard to communicate these baseline assessments with UMC leadership in order to support their efforts to improve performance. We plan to incorporate stakeholder input and extend the dashboard to further research practices in biomedical research. Beyond helping institutions assess how they are performing in relation to mandates or their institutional policy, the dashboard may inform interventions to increase the uptake of responsible research practices as well as evaluate their impact over time. In this short presentation, we will present the dashboard as a tool to support institutions contribute to more transparent and robust research.
